It was pleasure knowing you. The basic aim of ShutterScope is to disseminate quality education and impart in its each student an aesthetic sense of subliminal creativity combined with a vision to cater to the current photography and designing trends. Youll spend much of your time practicing the art of photography. You will learn more about lenses, flashes, set ups, composition, colour balance and the use of light. You will learn how to use professional Digital Cameras to express ideas, trigger emotions, and convey information.

The basic aim of ShutterScope Learnings is to promote the art of photography and presentation of audio-visual content in this era off communication. The dream of the Learning Division of the company is to inculcate in all its students a sense of urgency towards the growing need of fabrication.

The course is ideal for all those students who are pursuing their careers in the field of media and communication as it gives them a bird's eye view of what is in store ahead of them. It is also suited for those who have a deep passion for photography where age is no bar.

The course is beautifully designed in a way where you are groomed with expert know how's about a lot of parameters related to this arena. After the completion of the Photography Basics and Study of Lights module you can do nature, travel, calendar, portrait, candid tabletops and event photography. Conceptualization teaches you the art of conceiving a beautiful idea that is latent in the mind of the client and the brainstorming and the creative fusion that goes behind in coming up with b2b and b2c communication material development. Graphic Designing teaches you how to present your pictures in the best possible way. It also aims to develop designing expertise in you by which you can easily design corporate logos, monograms, letterheads, visiting cards, catalogues, calendar's etc. You can also design prints for collages, mugs t-shirts etc. for gifts and other such purposes. Video Editing and Sound editing enables you to present the audio visual content in the most presentable manner. It teaches you how to record sound, correct sound, add effects to your sound, channels and dB monitoring as well as non-linear video editing with text, sound dubbing and images. After this you can edit small home videos, documentaries, rough cuts for concepts of commercials and other such videos.

When I first held a professional camera back in 2004 and when I started graphic designing and video editing around the same time I never knew that the canvas of this arena is as big as the sky. In the recent years I have been involved with a couple of high profile wedding shoots. I have covered events at Spain, Tenerife and Antwerp and am aware of the international standards. I have worked with top notch corporate clients and have an exposure of their demands too. I have worked on documentaries too with international film makers.

Knowledge grows by sharing and that is what I intend to do.

...where its more the eye than the shutter...
